Gateway Server

Installation guide

Requirements:

- Linux or Windows OS
- Java 11
- Internet connection
- SpringBoot and Maven installed
- SQL Server (for persistence)
- Git

Steps:

1. Clone project from Github: git clone git@github.com:GreenHouseSEP4/GatewayServer.git
2. Build application with preferred IDE that has SpringBoot and Maven
3. Add preferred SQL database connection in the environment variables ('/resources/application.yml')
4. Run the application and navigate to http://localhost:5000 to see the REST API documentation
